SmartStream updates cash management solution

SmartStream has launched the latest version of its Transaction Lifecycle Management (TLM) Cash and Liquidity Management solution, v 3.1.

The “user-focused” design will allow for one-click business functions directly from the dashboard — for example, creating sweeps, managing fails and matches, as well as drilling down to individual cashflows, according to SmartStream.

TLM Cash and Liquidity Management v 3.1 allows users to analyse data in the markets, making it easier for users to understand their current liquidity position, SmartStream confirms.

Nadeem Shamim, head of cash and liquidity management at SmartStream, says: “This version is the outcome of many meetings we had with customers, during which we asked what they would optimally want from a solution.

“Though it took the design team an extensive amount of time and dedication, I believe we have developed a solution that combines usability and precision.”
